To Whom It May Concern:

Juergen Reiss has worked in the US Mobile Electronics department for about 9 months. His work time consisted of two days of the work week and involved setting of analog electronic boards, creating documentation for application projects while working with the Software Engineers and working with Valve Product line and associates in regards to the setting of the on-board electronics.

In the later capacity, Juergen was a huge asset for Bosch Rexroth and the group in the translating of documents and working with our German Colleagues in Lohr to get the valves working properly for OEM prototype accounts. He enjoyed this task as he had shown an interest in working in the setup of the on-board electronic and the core firmware for the units. We saw Juergen grow in this capacity as he was applying his electronic studies in the work place.

Juergen adapted very quickly to the group and the work assigned to him. One assignment from another Product Manager was to create a technical presentation and then trained other associates on application technology of the product. This task and subsequent presentation was well received by the associates.

It was a pleasure to have him in the group and on behalf of the whole Mobile Electronics Group, we wish him success and recommend him for continuing work in this electronic capacity. If there would be further questions concerning Juergen's work experience here in the US Mobile Electronics Group, please feel free to contact me at the below number.

Sincerely,

Terry Hershberger  
Director, Electronic Products  
Bosch Rexroth Corporation
